create the James Bond franchise, played a seminal role in and enabled U.S. victory at the Battle of Midway; and how become responsible for “radio intelligence” at Pearl Harbor how a high school dropout climbed the U.S. Navy ranks to technician quietly cracked Japanese diplomatic code in 1940; Pearl Harbor—and the role of the strike in shaping America and set precedents during the war.”

“Need to Know” is the first study to tackle the wartime efforts, internecine competitiveness and the unprecedented successes that helped bring victory to the Allies. Roosevelt and Winston Churchill, who had radically different views on democratic presidential can-

In a series of essays, Reynolds describes how to understand the racial trauma experienced by many Black people in America and the historical legacy that has on their mental health. Through therapy, he came to understand the concept of racial trauma and discovered how his own unrecognized racial trauma affected his mental health, self-image and worldview. Spanning more than 20 years, Reynolds weaves together a larger narrative that highlights the importance of mental health and family history in shaping his career as a young Black professional and shares his experiences growing up in the South to her family portrait of her experiences. Through this narrative, readers can learn from the author’s experiences and gain insights into the challenges that the nation faces today.

The book details stories of inside stories about clandestine war-time efforts, including attempts to persuade President Franklin D. Roosevelt of the importance of intelligence in fighting the war. It also chronicles the rise of the Office of Strategic Services, led by William J. Donovan, which played a crucial role in shaping the nascent intelligence services.

Reynolds has taught at the Naval War College, Johns Hopkins University and the Other Lifelong Learning Institute. “Need to Know” is his fourth book.
